

As requested, here's the data dump from our system. Frankly, I'm not sure what you'll find. My team knows these buses inside and out. A gut feeling from a 20-year veteran mechanic is worth more than a thousand spreadsheets. But, the city manager wants us to try this 'predictive' stuff.

See if you can make sense of it. Let me know if you find anything that can actually prevent a breakdown *before* it strands a bus full of passengers on the highway.
